Re: Estrogen and Progesterone Receptor Testing: DCIS and Retro Convertors

The following information is as a follow up to my Briefing note on July 4, 2006:

1. Ductal Carcinoma In Situ (DCIS):

Meetings are scheduled with the following on July 12, 2006:

[REDACTED]
Her ER/PR was originally ER: negative and PR: negative. She was diagnosed as DCIS by Mount Sinai and this has been confirmed by our internal review.

[REDACTED]
Her ER/PR was originally ER: negative and PR: weakly positive. She was diagnosed as DCIS by Mount Sinai and this has been confirmed by our internal review.

[REDACTED]
Her ER/PR was originally ER: negative and PR: negative. She was diagnosed as DCIS by Mount Sinai and this has been confirmed by our internal review.

2. Retro Convertors

In the group, we currently have 4 people who fall into this category. Of those retested:

147 were ER negative but their PR showed some positivity
273 had a level of ER positivity

A meeting is scheduled with [REDACTED] for Wednesday am, July 12, 2006.
Her ER/PR was originally ER: negative and PR: 20-25. It is now 0 and 0 both times it was tested at Mount Sinai.
She was tested in 2005 and is currently on Arimedx after completing her chemotherapy.

There is difficulty contacting Ms. [REDACTED].
Her ER/PR was originally ER: 25-30 and PR:50. It is now 0 and 0 both times it was tested at Mount Sinai.
She was tested in 1998

The other two retro convertors reside in the western and Central regions. Their medical directors will be contacted regarding disclosure.
