Eastern Health

February 24, 2006

Dr. [REDACTED]
[REDACTED]

Dear Dr. [REDACTED]:

RE: [REDACTED]

MCP #: [REDACTED]

Ms. [REDACTED] was diagnosed with breast cancer in 2000. The original report of the estrogen and progesterone receptors showed 20% staining for estrogen and 0% staining for progesterone. A repeat report from Mount Sinai Hospital has shown the levels of estrogen and progesterone to be 10% and 0% respectively.

This patient was discussed at the Physician Review Panel on February 23, 2006. Review of the patient's health record revealed that she is currently being treated with Femara, therefore there is no impact on the patient's treatment and no treatment follow up required.

We would ask that you communicate this information to your patient as soon as possible.

Yours sincerely,

Kara Laing, M.D., F.R.C.P. (C)
Clinical Chief, Cancer Care Program
The Dr. H. Bliss Murphy Cancer Center
