Subject: documentation
Attachments: [REDACTED].doc

Hi Louise,

In follow-up to our telephone call, I drafted up a form and now have all the information from the calls on Friday documented. I've attached one, hopefully it's what you had in mind, and if this meets the criteria tomorrow, Nancy and I will begin completing these for all the others identified during the summer.

Heather

Nov 2, 2007	To be informed that sample had not been previously identified and specimen was being sent for retesting	HP
Summary of Contact		
<p>Spoke to Mrs. [REDACTED]. She [REDACTED] and will be [REDACTED] years old in a couple of weeks. She had breast surgery December [REDACTED] 2000 and was on tamoxifen for 5 years. She has had pain in her incision site ever since; her doctor told her that it could be a bit of tissue that grew in the wrong place. Dr. [REDACTED] was her surgeon and she felt the lump and he did the surgery within 2 weeks. She has had no problems with cancer ever since. I explained that she had not been previously identified but that a specimen has now been sent. Results are expected within a week to 10 days. Once the results came back, I would be in contact. If the results were changed I would also contact her physician. I left her my name and number if she had any questions. I also left 1-877-444-1399 and explained it was a voice mail box but I would be checking it throughout the weekend.</p>
