Subject: deceased

discuss - 12 HP/PP

Hi,

Well.....I asked Wayne for a list of the deceased....I worked on it last night and this is what I have discovered:

Eastern Health has 186 deceased patients in database (this includes the one result we got back this morning)

- 23: results were disclosed to them, but they have passed away since
- 1: were original ER/PR results, as the patient had never had it done earlier but was upon request of family (she should not be in database)
- 11: already disclosed to family
- 6: require pathology review (retroconvertors)
- 3 require further checking from me with Reza (as I don't think one of them is deceased)
- 46: results have changed (5 had been paneled but were subsequently discovered to be deceased and letter was not sent)
- 34: no change in results
- 62: pending

For the other regions

I started adding in information about those that died since the retesting process and the original results from my database but I got tired of itthe regions have all that information anyway and will contact us if they need anything? Or do you want me to carry on? I suppose we need it for our own investigations and/or analysis anyway.....so I probably need to do it....see what I can talk myself into!!!

Other issues

After all that I cross checked the NLCHI deceased with my list....which I know I shouldn't be using....but I did find that 8 people are not on the NLCHI list that I have and there is no mention of anyone from St. Pierre.....I have to check all that out with Reza when he comes in....

Plan from there

Once I have that cleared up, I will forward the Eastern Health List to Jim to obtain the next-of kin names
While he is getting those, I will cross check with Nancy to make sure we have identified all those families who are already aware

When we have the names, the letters can go out for those that did not change

Heather
