Hi Pat!

Nash and I met yesterday to review the retros, please note the following;

██████████ and ██████████ should not be retro's, ██████████ has a MS result of ER-10% and PR-90%, ██████████ has a MS result of ER-10% and PR-0%, both cases are considered POSITIVE for their respective year performed. We don't know the original results; they may in fact be CONVERTS, please follow up with Dr. Neil from WMH.

██████████ is a RETROCONVETER and will be entered into IS as such.

██████████ is QUERY; we will send her out for another consult.

Nash also presented a list of another seven patients. Four out of the seven are completed, two cases are being pulled for complete review and one is outstanding.

We are meeting on Wednesday is tackle the DCIS list.

Barry
