Subject: NLCHI list

Hi,

I reviewed the NLCHI list last night and compared it to ours. AS suspected, all patients that were identified as St. John's, G.B. Cross, Carbonear or with the region left blank are on our list.

There are some issues that I identified:

Patients are identified as 2 patients even though the MCP's are the same:

[REDACTED]	MCP # [REDACTED] MCP # [REDACTED]
[REDACTED]	MCP# [REDACTED] MCP# [REDACTED]
[REDACTED]	MCP# [REDACTED] MCP# [REDACTED]
[REDACTED]	MCP# [REDACTED] MCP# [REDACTED]
[REDACTED]	MCP# [REDACTED] MCP# [REDACTED]
[REDACTED]	MCP# [REDACTED] MCP# [REDACTED]

It looks like these patients are identified as the same patients, but in fact they are different patients

[REDACTED] MCP# [REDACTED] from St. John's is not on the list. [REDACTED] is there twice

There are a couple of other issues, but I'm running out of time....but you get the picture.....

Heather
