Hi Barry,

I will take a look at this request and get back to you with details.

Maria

Hi Maria!

As per our conversation, this is the requested material. To send this as soon as possible would be deeply appreciated.

1. Full details of antigen retrieval, to include instrument used, type of buffer, its pH and molarity, time of heating, time of standing after heating.
2. Full details of antibody dilution for the 6F11 clone, time of incubation, and temp of incubation 3, Full details of 2ndry antibody and detection kit, to include supplier and supplier code numbers, time of incubation, temp of incubation. I need thes details for each layer, ie 2nd antibody layer and 3rd ABC layer.
4. Full details of DAB used to include, supplier and supplier code number, time of incubation and temp.

Lastly, I need to know if they used an auotomated platform such as the Ventana or Dako Autostainer, or whether they tested everything manually without an automated system.

Thanks
Barry Dyer
