4. NEW BUSINESS (CONT'D):

4.2 Quality Control of Immunoperoxidase Staining

There has been a study going on the quality of the immunoperoxidase staining for both sites. It is agreed that control for immunoperoxidase staining be run for every batch. A Pathologist will check the control slide before sending the slide to the other site. Dr. S. Parai has agreed to do this. In case he is not available another Pathologist will be looking at the control.

Calretinen is a positive control for mesothelioma. It is agreed that this antibody is needed in our panel. Mr. Terry Gulliver has agreed to order antibodies as soon as possible.

5. ADJOURNMENT

There being no further discussion, the meeting was adjourned at 4.p.m. The next meeting is scheduled for April at St. Clare's site.
